

# WATER COOLING AND COOLING TOWERS 255

neath, as shown by the detail illustration in fig. 32. From these the water rebounds and falls on to the triangular splashbars below. Some of the water rebounds from each splashbar and some runs down

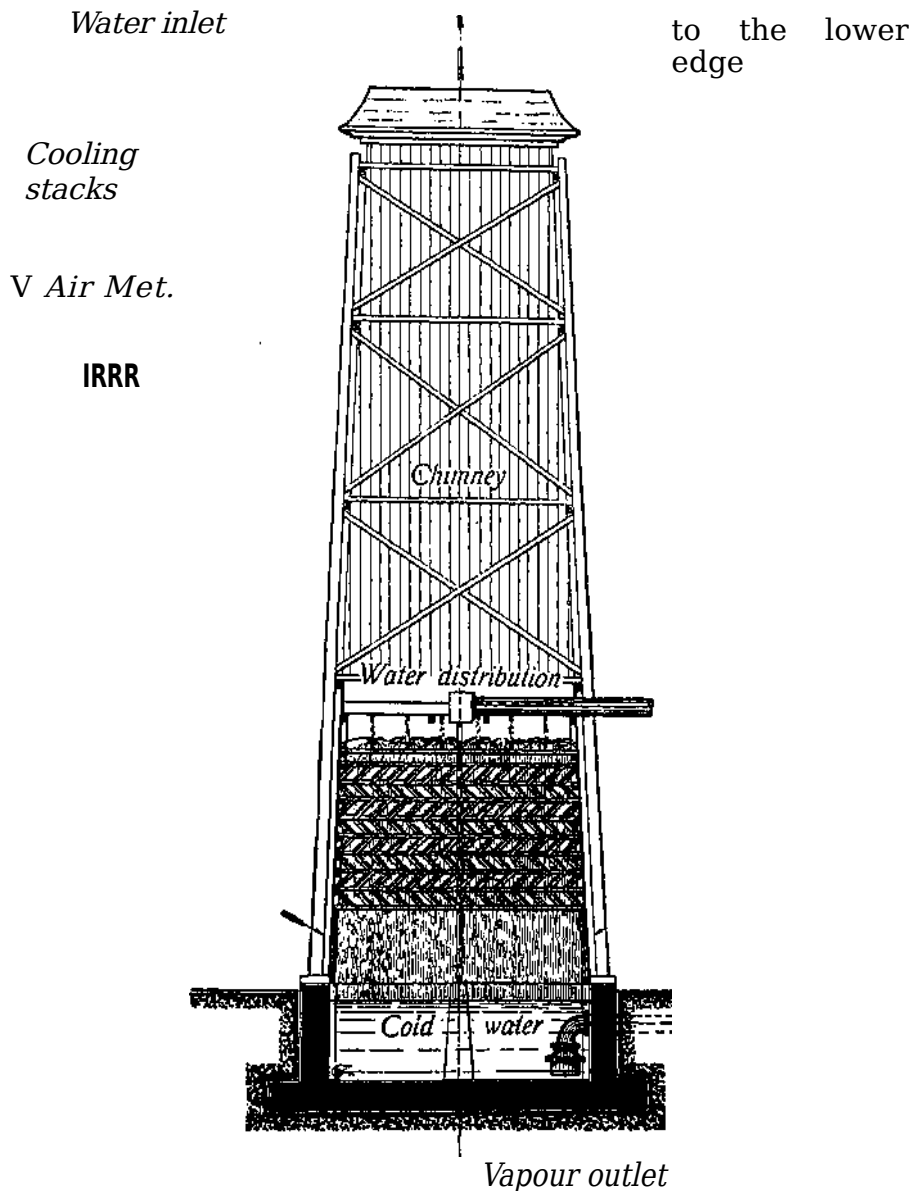

Fig. 3 r.—Chimney Cooler

of the bar and falls on the bar below. Eventually the water falls into the cooler tank below as a fine shower.

Several other firms build similar cooling towers, the principal differences being in the arrangement and shape of the splashbars. The Davenport
